**NTS Location, Author and Citation Index to
Nova Scotia Department of Natural Resources,
Minerals and Energy Branch Assessment Reports,
1996-1999**

Introduction

Assessment Reports are technical reports submitted to the Department by holders of mineral exploration licences. These reports describe exploration work and studies conducted by the licensees on ground covered by their exploration licences.

The titles of the assessment reports cited in this index are not the original titles of the reports, but are modified titles composed by the authors of this index. The modified titles are designed so that the reader can determine exactly what types of geological, geochemical, geophysical, drilling and other exploration activities are described in each assessment report.

Each assessment report is uniquely identified by an assigned report number, e.g. Assessment Report ME 1996-1. This number reflects both the year of receipt of the assessment report in the Department, i.e. 1996, and the actual number of reports received in that year, i.e. -1 for the first report, and so on.

Open File Report ME 2000-1 is a bibliographic NTS (National Topographic System) Location, Author and Citation Index to all Nova Scotia Department of Natural Resources, Minerals and Energy Branch mineral exploration assessment reports that became available between January 1, 1996, and December 31, 1999.

Previously published indexes to the above documents, up to 1998, include: **Report ME 1981-4, Index to Assessment Reports 1864-1980; Report ME 1981-6, Index to Publications, Open File Reports and Theses 1862-1980; Report ME 1991-2, NTS Location Index to Nova Scotia Department of Mines and Energy Assessment Reports, Open Files, Publications and Theses 1981-1990; Report ME 1991-3, Author Index to Nova Scotia Department of Mines and Energy Assessment Reports, Open Files, Publications**

and Theses 1981-1990; Report ME 1991-4, Subject Index to Nova Scotia Department of Mines and Energy Assessment Reports, Open Files, Publications and Theses 1981-1990; Report ME 1996-2, Author Index to Minerals and Energy Branch Assessment Reports, Contribution Series, Open Files and Publications for 1991-1995; and Report ME 1996-3, NTS Location Index to Minerals and Energy Branch Assessment Reports, Contribution Series, Open Files and Publications for 1991-1995.

All the assessment reports cited in this index can be consulted in the library of the Halifax office of the Department and in the Core Library in Stellarton. Microfiche copies of assessment reports can be purchased directly from Precision Microfilming Services, 3770 Kempt Road, Halifax, Nova Scotia, B3K 4X8 (902-455-5451).

Index Organization

Part 1. NTS Location Index

The NTS Location Index is a hierarchical, geographic index, organized and sorted on the basis of the National Topographic System (NTS) of map sheets that covers Nova Scotia (Fig. 1). Citations are sorted in ascending order of NTS map sheet. Thus, information is presented in the following order of 1:250 000 map sheets: 11D, 11E, 11F, 11K, 20O, 20P, 21A, 21B, 21H. Within any given 1:250 000 NTS map sheet (e.g. 11D), citations are further subordered by Claim Reference map sheet (e.g. 11D/10A) (Fig. 1).

The Claim Reference map system is used by the Nova Scotia Department of Natural Resources for map staking of onshore mineral exploration claims. This Claim Reference map system is based upon the National Topographic System, whereby each Claim Reference map is one-quarter of a standard 1:50 000 NTS map. For example, NTS map 11D/10 consists of claim

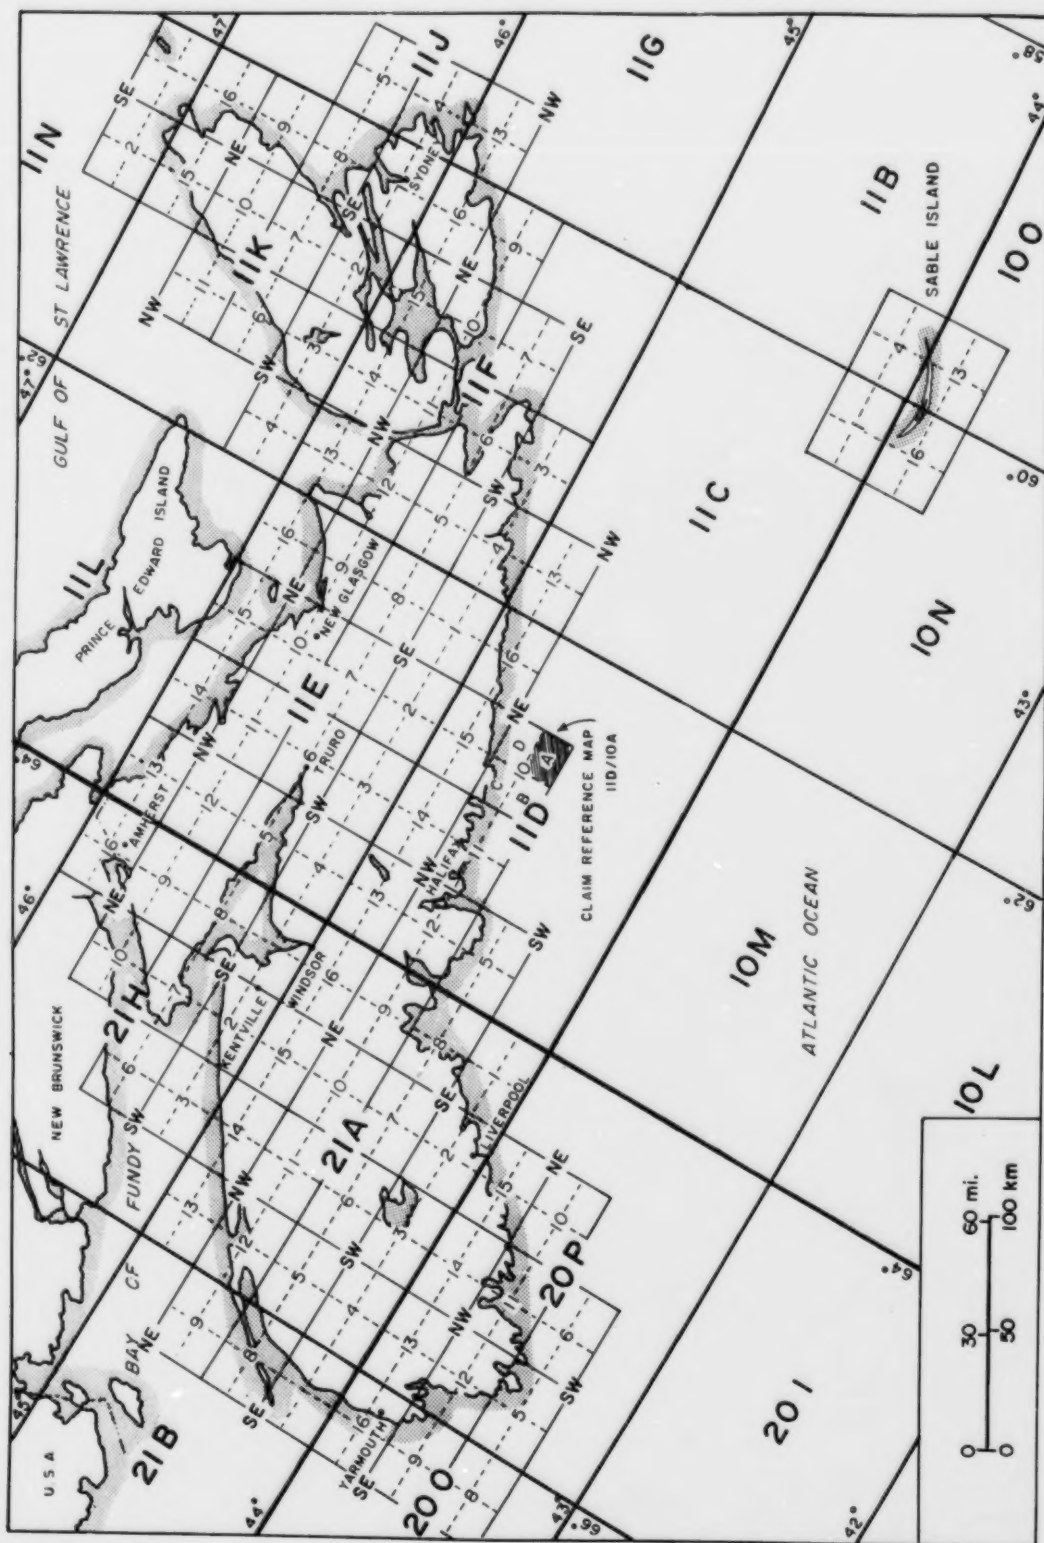

Figure 1. NTS and Claim Reference maps for Nova Scotia

reference maps 11D/10A, 11D/10B, 11D/10C and 11D/10D, these maps being lettered in a clockwise direction from the southeastern corner of NTS map 11D/10 (Fig. 1). Within any given map sheet, the citations are sorted chronologically from most recent to oldest.

Part 2. Author Index

The Author Index is an alphabetical listing of all the personal authors, corporate authors, exploration licensees and exploration companies who are responsible for generating or sponsoring all of the assessment reports cited in **Open File Report ME 2000-1**. Under any given author name, assessment reports are sorted chronologically from most recent to oldest.

Part 3. Citation Index

The Citation Index is a chronological listing, from the most recent to the oldest, of all assessment reports

that became publicly available between January 1, 1996, and December 31, 1999.

NovaScan

Open File Report ME 2000-1 was generated from NovaScan, the provincial geoscience database for Nova Scotia. The Minerals and Energy Branch adds new bibliographic records on the geoscience of Nova Scotia to NovaScan on an ongoing basis. Specific searches and custom indexes can be generated from NovaScan upon request in the Halifax office of the Department.

Acknowledgments

We thank Angela Miller for her dedicated efforts on data entry and word processing and Scott Swinden, Executive Director, Minerals and Energy Branch, and Mike Cherry, Director, Mineral and Energy Resources Division, for their continued support and encouragement of our NovaScan activities.
